

Sr. eAM and REX Systems Specialist | Europe SelectionPartner

NORWEGIAN VERSION

Attractive system challenges within global industrial operations

We are looking for an independent, action- and improvement-oriented key person who will shape our further digitalisation.

The attractive and challenging position entails system and subject management responsibility within eAM (enterprise Asset Management systems) for the businesses in Europe. The systems are mainly built on Oracle and Microsoft Azure technology.

The role is about good interaction with eAM system owners at our five locations in Europe. The goal is to ensure data integrity, reliable system functionality and first/second level user support related to our European business. We also want you to ensure extended user support response at all European operating locations, including collaboration with eAM consultants also globally.

You will deliver professional expertise and provide input for use, adaptations and play a key role in relation to the cross-functional further development of our systems. It is also important that you facilitate training within eAM and maintenance systems in operation.

We offer a challenging and varied role with geographical flexibility and good development opportunities in a leading industrial business.

Europe | <input type="checkbox"/> Webcruiter-ID: | 4551179031E |

Responsibilities and central tasks

- Design and implement a good system and processes to monitor eAM and associated applications for proactive identification and correction (so-called “heartbeat check”)
- Take responsibility for solving system challenges by supporting the locations' eAM users
- Take lead to provide input to the development of eAM, maintenance systems and applications (Maint Systems includes REX-IT and Connected Worker applications)
- Collaborate with and coordinate other eAM consultants globally, with a focus on the distribution of expertise and tasks
- Configure an efficient help desk to facilitate and manage support requests from European users.
- Facilitate training within eAM and associated systems via developers and suppliers, and translate this into effective competence development in our European units.

We are looking for these qualifications

- Good system competence (SQL, Osisoft, Microsoft Azure and/or Oracle)
- Successful experience from a similar role with an international perspective
- Preferably expertise in project management with an interdisciplinary or industrial focus
- Good digital and language skills (English is a requirement)

Personal traits

- Open to new experiences, innovative and innovative
- Planned, organized and structured
- Outgoing
- Stable, robust and predictable

We offer | Good reasons to apply

- A central position with varied challenges and good development opportunities
- Focus on social responsibility, sustainability and values
- A good working environment characterized by continuous improvements
- Competitive conditions
- Solid owner with global perspectives
